

# Daily Work Progress Report

**Name:** Ishimwe Serge

**Position:** Frontend Developer

**Date:** 25 October 2025

## Introduction

Today, I successfully **completed the Menu Category Management System** for the **Aby Booking Platform**. This feature allows restaurant companies to organize their menus more efficiently by creating, editing, and managing menu categories directly from their company dashboard. The goal was to finalize this module and ensure it functions smoothly, both visually and technically.

## Key Tasks Completed

### 1. 📁 Menu Category Management Completion

- Finalized the full workflow for **adding, editing, and deleting menu categories**.
- Integrated real-time updates so that changes appear instantly without requiring a page refresh.
- Ensured that all menu categories are properly linked to each company for accurate data organization.
- Improved form validation to prevent duplicate or empty category names.

### 2. 🧠 User Interface Improvements

- Refined the category management interface for a cleaner, more intuitive layout.
- Added confirmation modals for category deletions to prevent mistakes.
- Ensured full responsiveness and consistent design across desktop and mobile devices.

### 3. ⚙️ Testing & Optimization

- Conducted multiple rounds of testing to confirm that category creation, updates, and deletions all function correctly.
- Optimized data loading and response handling to improve performance.
- Verified smooth integration between frontend and backend APIs for data consistency.

## Summary

The completion of the **Menu Category Management System** on **Aby Booking** provides:

- 📁 **A fully functional and responsive module** for managing menu categories.
- ⚙️ **Real-time updates** ensuring smooth and efficient user interaction.
- 🧠 **An improved, intuitive UI**, giving restaurant companies full control over their menu structure.

This marks an important step in enhancing the Aby Booking company-side experience — making it easier for restaurants to organize and maintain their menus efficiently.
